

PYTHON PROJECT

DATASET : Seoul Bike Sharing Demand

Team members :
Ryan Makouangou
Antoine Mauvoisin
Clemence Millet

DESCRIPTION OF THE DATASET

Currently Rental bikes are introduced in many urban cities for the enhancement of mobility comfort. It is important to make the rental bike available at the right time.

Providing the city with a stable supply of rental bikes becomes a major concern.

The crucial part is the prediction of bike count required at each hour for the stable supply of rental bikes.

Attribute Information:

Date	Rented Bike Count
Hour	Temperature (°C)
Humidity (%)	Windspeed (m/s)
Visibility (10m)	Dew point temperature (°C)
Solar radiation (MJ/m ²)	Rainfall (mm)
Snowfall (cm)	Seasons
Holiday	Functional Day

PROBLEMATIC

We want to be able to predict the number of bikes rented around the city for certain hours/periods and with certain meteorologic conditions so that we can make sure there are enough bikes available and predict when maintenance can be handed.

DISCOVERY OF THE DATASET

```
df.isna().sum()
5] ✓ 0.1s
```

Date	0
Rented Bike Count	0
Hour	0
Temperature(C)	0
Humidity(%)	0
Wind speed (m/s)	0
Visibility (10m)	0
Dew point temperature(C)	0
Solar Radiation (MJ/m2)	0
Rainfall(mm)	0
Snowfall (cm)	0
Seasons	0
Holiday	0
Functioning Day	0
dtype:	int64

```
df.info()
[171] ✓ 0.1s
```

... <class 'pandas.core.frame.DataFrame'>
RangeIndex: 8760 entries, 0 to 8759
Data columns (total 14 columns):

#	Column	Non-Null Count	Dtype
0	Date	8760 non-null	object
1	Rented Bike Count	8760 non-null	int64
2	Hour	8760 non-null	int64
3	Temperature(C)	8760 non-null	float64
4	Humidity(%)	8760 non-null	int64
5	Wind speed (m/s)	8760 non-null	float64
6	Visibility (10m)	8760 non-null	int64
7	Dew point temperature(C)	8760 non-null	float64
8	Solar Radiation (MJ/m2)	8760 non-null	float64
9	Rainfall(mm)	8760 non-null	float64
10	Snowfall (cm)	8760 non-null	float64
11	Seasons	8760 non-null	object
12	Holiday	8760 non-null	object
13	Functioning Day	8760 non-null	object

dtypes: float64(6), int64(4), object(4)
memory usage: 958.2+ KB

CHANGES MADE ON VARIABLES

DATA NORMALIZATION

- We changed the type of the Date column from string to Datetime
- Transform the columns Seasons and Holiday to int

For Seasons :

Spring = 1
Summer = 2
Autumn = 3
Winter = 4

For Holiday :

Holiday = 1
No holiday = 0

DATA ENCODING

New column FullDate that puts together the 2 columns Date and Hour

Data Encoding

Datetime Datas

```
df['Date']=df['Date'].astype(str)
df['Hour']=df['Hour'].astype(str)
df['Full Date']=df[['Hour', 'Date']].apply(' '.join,axis=1)
df['Full Date']=pd.to_datetime(df['Full Date'],format="%H %d/%m/%Y")
df['Full Date'].info()
```

177] ✓ 0.2s

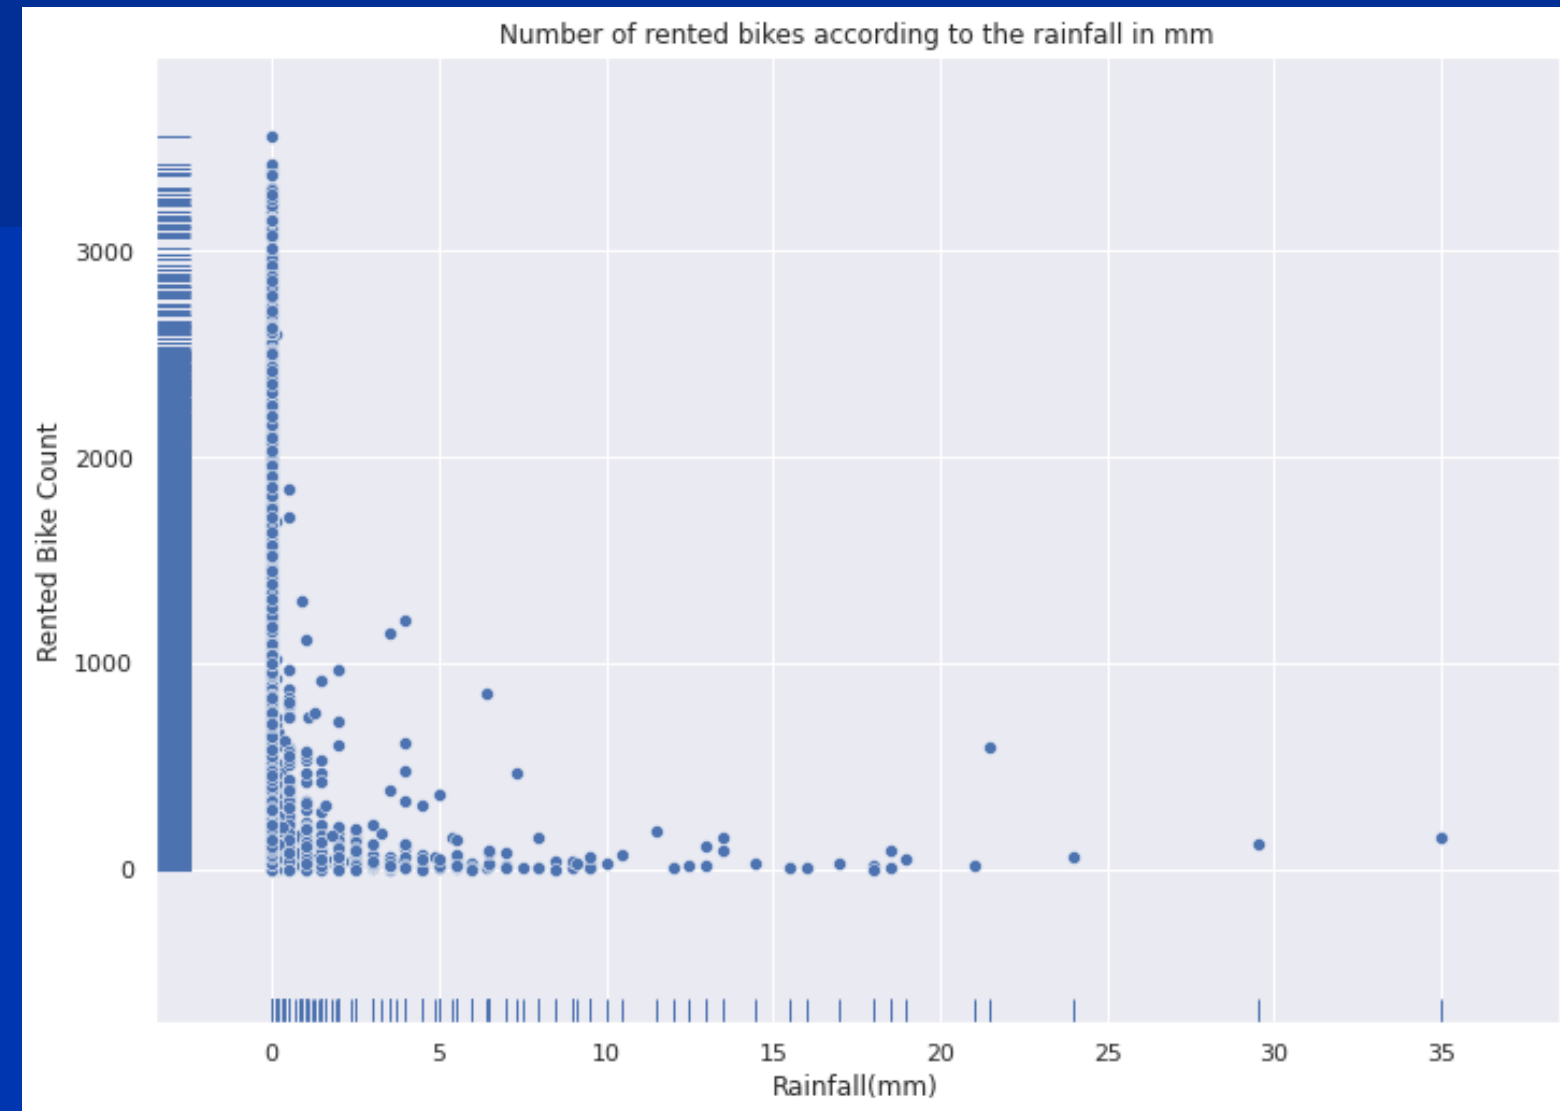

```
<class 'pandas.core.series.Series'>
RangeIndex: 8760 entries, 0 to 8759
Series name: Full Date
Non-Null Count  Dtype
-----
8760 non-null   datetime64[ns]
dtypes: datetime64[ns](1)
memory usage: 68.6 KB
```

```
df['Full Date'].sample(n=5)
```

178] ✓ 0.1s

```
6302    2018-08-20 14:00:00
2505    2018-03-15 09:00:00
617     2017-12-26 17:00:00
3206    2018-04-13 14:00:00
7907    2018-10-26 11:00:00
Name: Full Date, dtype: datetime64[ns]
```
